

Juan Pablo Salazar

Data Scientist | Health Researcher

EDUCATION

University of Cambridge (Online) Postgraduate Degree in Data Science, Machine Learning, and AI	2024–2025
Pompeu Fabra University (Barcelona, Spain) Public Health Master of Science (MPH)	2021–2023
John Hopkins University Fall institute (Barcelona, Spain) Scholarship for two courses on Public Health	2022–2023
University of Montreal (Montreal, Canada) Bachelor's in Chemistry	2017–2020
Lycée Français Louis Pasteur (Bogota, Colombia) International French baccalaureate in science (with honors)	2000–2014

EXPERIENCE

University of Cambridge (Remote, United Kingdom) ▪ Master's level postgraduate program in Data Science, Machine Learning, and AI, covering Python, statistical analysis, and predictive modeling. ▪ Built and optimized machine learning models, including Decision Trees, Neural Networks and Natural Language Processing algorithms, for classification and regression tasks on real world data sets for accurate decision making. ▪ Capstone project with the Bank of England, applying advanced Machine Learning and Natural Language Processing techniques to real-world financial data.	Sep 2024–Jun 2025
Centre for Research in Occupational Health (Barcelona, Spain) ▪ Authored thesis: 'Precarious Employment and Excess Mortality during the COVID–19 Pandemic', with subsequent submission to scientific journals for publication. ▪ Data treatment, statistical analysis, and interpretation of the Continuous Working Live Sample (CWLS) based on the Spanish WORKing life Social Security cohort (WORKss) – a 4% representative sample of the Spanish working population, using the R software. ▪ Academic research on precarious employment, mortality, and employment conditions during the COVID–19 pandemic.	Sep 2022–Nov 2023
Public Health Agency of Catalonia (Barcelona, Spain) ▪ Authored and published detailed recommendations for greywater recycling in Catalanian communities and safe handling of household chemicals. ▪ Conducted research on environmental issues affecting Catalanian communities on water conservation and sustainable practices. ▪ Designed outreach programs on environmental health awareness.	Apr 2023–Jul 2023
Bioanalytical Chemistry at the University of Montreal (Montreal, Canada) ▪ Second author of “ <i>Absolute Quantification of Cholesterol from Thin Tissue Sections by Silver-assisted Laser Desorption Ionization Mass Spectrometry Imaging</i> ”, published in the Bioanalytical and Analytical Chemistry Journal. https://doi.org/10.1007/s00216-022-04262-6 ▪ Data treatment, interpretation, and analysis with R, flex imaging, and flex control software. ▪ Developed R code to extract cholesterol levels in mouse brain tissue samples from mass spectrometry imaging, enabling histology heat maps visualizing cholesterol distribution.	Mar 2021–Sep 2021

SUMMARY

I am a data scientist and health researcher pursuing a postgraduate degree in Machine Learning and Artificial Intelligence at Cambridge University. As part of this program, I am working on a project with the Bank of England, applying advanced data science techniques to real-world data sets.

My goal as a professional is to develop predictive models for health research and diagnosis, improving outcomes through data-driven insights. I am eager to contribute to an organization focused on advancing health research and accessibility while continually growing professionally. With international research and work experience across Canada, Spain, the UK, and Colombia, I am well-prepared to thrive in multilingual and global environments. I am committed to building a long-term career in healthcare innovation and data-driven research.

SKILLS & EXPERTISE

Data Science
Health and Science Research
Python, SQL, Excel, R software
Mathematics and problem-solving
Machine Learning Algorithms
Keras, PyTorch, and Scikit-learn
Neural Networks, Decision Trees
XGboost
Natural Language Processing
Cloud (AWS Sagemaker, Azure ML)
Academic Research

LANGUAGES

Spanish (Native)
English (C1 – Advanced)
French (Near- native)
Catalan (A2 - Elementary)
